

User:

Hi, nice to meet you.

Assistant:

Hello! It's nice to meet you too. Thank you for taking the time to speak with me today about the Entry-Level Machine Learning Engineer position at Mozilla.ai. To start, could you tell me about your experience with machine learning and any projects you've worked on in this area?

User:

Yeah, yeah, sure, I'd be happy to. I have a degree in artificial intelligence from the University of Kent and I've worked on a handful of projects. One of them involved deploying a large language model based pattern infringement detection system, which is now live on our company's website. Another project I worked on involved using OpenCV to classify resistors.

Assistant:

That's interesting. Could you elaborate on the large language model-based pattern infringement detection system you mentioned? What specific challenges did you face during its development and deployment?
