

**User:**

Hello.

**Assistant:**

Hello! Thank you for taking the time to speak with me today about the Entry Level RAG Engineer position. To start, could you tell me about your experience with Retrieval-Augmented Generation (RAG) and any projects you've worked on that involved this technology?

**User:**

yes I worked on building a rag pipeline and the LLM model of choice was llama that is L L A M A 3.1 by Meta and I used the 8 billion parameter model because it was the only thing that I could run locally and I used lang chain to create a rag pipeline where I would load the context the LLM context with the latest information by web scraping

**Assistant:**

That's interesting. Could you elaborate on how you implemented the web scraping component in your RAG pipeline, and what challenges you faced in integrating it with the LLM?
